## Tiktok video app download for pc

(Image credit: Con Krempas) President Trump and technology experts fear that TikTok may be spyware, but the fake TikTok Pro Android app is the real deal. It will steal your text messages, photos, your location and Facebook password, waken up to take screenshots, connect to a microphone, make calls, send text messages and drop off other apps. The TikTok Pro app is not in the Google Play Store, but because the U.S. government has announced it will ban TikTok unless the Chinese app finds an American buyer, many people may be forced off the road in search of the real thing. TikTok Pro will wait to get them to download it. Users expecting to use the TikTok app within the ban may be looking for alternative methods to download the app, wrote Shivang Desai of security firm ZScaler in a blog post yesterday (September 8) detailing the new spyware threat. In doing so, users can accidentally install malicious apps. It's not the first fake TikTok Pro app to appear - Desai pointed out that a previous app was promoted via WhatsApp and text messaging spam, and once installed, showed you a lot of ads. It was more annoying than it was harmful. Desai did not specify how this dangerous new version was compensated, but the same avenue of texts and messaging chats may be a safe bet. Once the fake TikTok app is installed, it quickly hides its own icon, Desai wrote, perhaps to make the user think the installation failed. To steal your Facebook credentials, it creates a fake Facebook login page and waits for you to type your username and password. This functionality can be further expanded to steal other information, such as bank approvals, although I have not seen any banks be targeted in this attack, Desai wrote. It's pretty easy to avoid TikTok Pro and other malicious Android apps. First, don't download or install any app that's not in the official Google Play App Store. (Older Android phones can prevent this by leaving unknown sources unchecked in security settings.) Second, download and install one of the best Android antivirus apps, which will block such Android malware immediately. Kaspersky's best internet security today for AndroidKaspersky deals™ internet security... TikTok will soon be joining the list of social networks integrated into your favorite apps. On Monday, November 4, TikTok announced TikTok for Developer, a software development kit (SDK) that allows third-party apps to add a TikTok shortcut to the popular network focused on short videos. The platform launches with seven apps that are already building a shortcut of TikTok to the program, including mobile video editors like Adobe Premiere Rush, as well as Plotaverse, an app for turning still images into GIF animations. The capability allows users to easily access more editing tools and options than what's on TikTok alone. Along with Rush and Plotaverse, the list of apps taking TikTok integration includes PicsArt, photo editing and popular video Enlight Videoleap, mobile video editor; fuse.it, an augmented reality video tool; medal.tv, an app for sharing game clips; and Memento GIF Maker, an app for automatically creating animations from your camera roll. TikTok offers a lot of creative filters and editing tools, and we want to continue to give our users the tools to create everything they can imagine, the company shared in a blog post. The sharing feature is the first tool launched on TikTok's new SDK, which allows users to share directly from third-party apps. TikTok, owned by China-based ByteDance, says the combination also means enriched content in the app. The news comes shortly after the U.S. government launched a formal investigation against TikTok over the musical.ly acquisition because the company had not received approval from the Foreign Investment Committee (CFIUS) before the acquisition. However, investment rules are not the platform's only problem. Just days before the CFIUS investigation was announced, two senators called for the app to be investigated as a counterintelligence threat because of concerns that the app could collect user data, and would then be required to comply with Chinese law that might require the company to cooperate with intelligence work. TikTok's problems are not unique to The Usa either - an investigation has been launched this summer in the UK into how the app handles personal information for its youngest users. TikTok editors' recommendations have a ton of video content and sometimes you may want to download TikTok videos to your devices. Downloading videos from TikTok lets you watch your favorite content even when you're not connected to the Internet. It also allows you to share these files with others using your preferred sharing methods. There are different ways to download TikTok videos on multiple devices. Download TikTok videos on Android If you are using an Android device, you have two ways to download TikTok videos on your phone or tablet. Using the TikTok app itself one way to download TikTok videos on Android is to use the official TikTok app. This method works for all videos in which the creator has enabled the download. Launch the TikTok app on your phone. Find the video you want to download. You'll see some options on the right. Tap the option that has an arrow icon (is to share the video). On the next screen, you'll have several ways to share the selected video. Because you want to download this TikTok video, tap Save Video. Wait for the video to be downloaded to your device. Look at the live progress on the screen. You'll get a menu that will twer your video sharing. Tap Cancel when the video is currently downloading on your device. Open the Gallery app and you'll find that the video you selected TikTok downloaded there. Using WhatsApp some videos on TikTok do not offer the download feature. However, there is a workaround for downloading Ticktock videos via WhatsApp. Turn on WhatsApp on your phone. Tap the three dots in the upper-right corner and select a new group. Open the newly created group and tap its name at the top. Locate the contact you added, tap it, and select Remove. This will remove them from the group. Turn on TikTok on your device. Play the video you want to download. Then tap the share icon on the left side. On the Share To menu, tap WhatsApp. Select the newly created group to share your TikTok video with. Open File Manager and Head to Internal Storage &gt; WhatsApp &gt; Media &gt; WhatsApp &gt; Sent. You'll find your video in Tiktok there. Download TikTok videos on iPhone iPhone users there are three different ways to download TikTok videos. This includes downloading videos that cannot be downloaded. Using the official TikTok app if the download is available for the video you want to download, you can use the TikTok app to save it to your phone. Open the TikTok app on the iPhone.Play of the video you want to download. Tap the share icon in the left menu. Select Save Video. Ignore the Share to menu that appears on the screen and tap Done to get rid of it. Downloaded TikTok video will be available in the Photos app on iPhone.A The quickest way to download the video is to tap and hold the video and select Save Video. This does not require opening the Share menu. Use Instagram If you come across a video that doesn't have it downloaded, you can still download it to your phone using the Instagram app. Make sure Instagram is installed on your iPhone and you're logged into your account. Open the TikTok app on iPhone.Find the video you want to download. Tap the share icon on the left side. Choose Instagram from the Share To menu to share your video to Instagram. It won't really be posted on your profile. The status of the Instagram post will open. Tap Cancel in the upper-left corner because you don't want to publish anything. Open the Photos app on your iPhone and you'll find that TikTok's selected video is downloading there. With Total Files If you don't use Instagram and want to download a TikTok video that isn't available for download to your iPhone, you can use the File Manager File Total app to do so. Open the app store on your iPhone, search for total files, and install it. Launch the TikTok app on your iPhone.Select the video you want to download. Tap the share icon on the left side. Select Copy Link on the next screen to copy the link to the selected video. Open the Total Files app on iPhone.Tap in the web icon in the lower-right corner. Tap and hold the address bar at the top and select Paste. Then hit the go at the bottom. Play the video on the next screen. Tap the video when it starts playback and you'll be prompted. Tap the green check mark icon. Total files will ask where you want to save the video. Select a destination and tap Done. The video is downloaded and available to view in the Total Files app. A PC that downloaded TikTok videos on your PC doesn't require you to install any apps. All you need is access to the link for your video and you can download and save the video to your Windows or Mac computer. Use the Copy Link feature in TikTok on your phone to copy the video link and send it to your computer. Open the link in the browser on your computer. Right-click the video and select Test. You'll see the download link highlighted below. Open it on a new tab. Right-click the video and select Save Video As. Through online download there are many online TikTok downloaders to help you download TikTok videos to your computers. Go to the musicallydown online download site. Paste the TikTok video link and click Download. Click Download MP4 now on the next screen. What's your favorite way to download TikTok videos on your devices? Let us know in the comments below.
